

## a Probability diagnosis and confidence-based record selection

- Link probabilities and returned  $c$  by record identity.
- Do not interpret  $c$  as max probability or entropy.

Returned confidence  
 $\tau = 0.90$

**Retain: 67 records**

Coverage: 60.4%

Tile intensity: absolute log error

**Fusion MAE = 0.079**

**Route for review: 44 records**

Coverage: 39.6%

Tile intensity: absolute log error

$$H(p) = -\sum_i p_i \ln(p_i) / \ln(6)$$

Entropy is a separate diagnostic.
